Hyperwave eKS is the solution for web-based document management.
Your information can be published and organized quickly and easily.

The Architecture
Hyperwave eKS makes it easy to publish structured and unstructured data in a dynamic information system, and allows efficient access to that data anytime, anywhere. Most importantly, it combines sophisticated content and document management with standard-based web technologies, thereby supporting core processes in your organization efficiently. Personalized information agents, guaranteed content integrity and a fine-grained, hierarchical access control system allow you to control your information flow. Other outstanding features are the intuitive user management system, role-dependent content display, and automatic information distribution, all of which support both knowledge management and business-to-business applications in an intelligent way. A high level of scalability and simple customization and administration tools allow for flexible expansion of the system.

Altogether, the extensive functionality and open standards make this web-based software a leader in its technology.

Hyperwave eKS is based on Hyperwave IS/7, the Enterprise Content Management platform. Like an operating system, IS/7 provides its applications with basic functionality such as rights, link and version management. Because it uses completely web-based technologies, Hyperwave IS/7 and its solutions can be deployed immediately and everywhere, without a major rollout.

Navigation
Breadcrumbing or classic navigation?
Hyperwave eKS supports both navigation methods and, in order to make it easy to structure information, you can create as many virtual directories as you require without it resulting in double the amount of data. Directory trees are, of course, subject to access control: users will only see content and directories for which they have access rights.

Navigation

DOCUMENT MANAGEMENT IN THE INTRANET
Information must be managed the way the organization requires it.

Hyperwave eKS is flexible enough and so easy to use that internal changes in the organization could be replicated quickly and easily in the system.
Creating and Modifying
The ability to create and store any kind of content is the essence of every document management system. How usable such a system is depends on the ease with which these tasks can be accomplished. We at Hyperwave strive to empower individuals to create and share content without the assistance of system administrators or web administrators. At the same time, we assure that company-specific processes and access rights are automatically enforced.

Search
Creating and publishing data is important, but the most important functionality is probably search. Documents are searched for, found and read more often than they are created. That is why an optimal, easy-to-use search function is essential to any document management system.

Hyperwave eKs incorporates a fulltext search, which supports all kinds of document formats and allows information to be found as soon as it has been published. Speed typing, „Did you mean?” and advanced filter and sorting assures fast and accurate information retrieval.

Functions

Enterprise Content Management
✔ Publishing from your browser, or using drag-and-drop in the Windows environment* or directly from an application
✔ Role-dependent content display
✔ Optional Workflow engine with approval process*
✔ Automatic retirement of out-of-date information
✔ Guaranteed link consistency in HTML, using Hyperwave’s dynamic link management
✔ Agents with automatic notification of newly found content
✔ Easy customization of the user interface

Document Management
✔ Supports all established document formats e.g., MS Office, multimedia formats, HTML, XML, PDF
✔ Versioning, document histories, check in and check out
✔ Automatic categorization and metadata management
✔ Integrated fulltext search in over 200 document formats
✔ Searching in external information sources such as Lotus Notes, MS Exchange or web servers*
✔ Search and display similar documents
✔ Speed typing
✔ Did you mean?
✔ Resultset filter/sort

* You must purchase an additional module for this functionality

SYSTEM REQUIREMENTS

Browser
Internet Explorer 9
Mozilla Firefox 13 and higher

Server
Hyperwave IS/7.3

Client operating system
Windows XP SP3
Windows Vista SP2
Windows 7
Mac OS X 10.4 and higher
Linux/Unix

SYSTEM CHARACTERISTICS
Multilingual and international.
Administration in your web browser.
Can be integrated using web services (for example).
Extensible using an open programming interface and SDK.
